

Evolving Classrooms: Promoting Collaborative Language Learning in Computer Labs

Cassandra Rosado & John Kotnarowski

Illinois ESL Program, Linguistics Department

University of Illinois at Urbana-Champaign

CALICO - May 31, 2018

Context & Motivation

- All of our ESL Academic Writing courses have been taught in computer labs since about 2010.
- While grateful for the luxury of the labs, most of our instructors feel that the traditional computer classroom layout is isolating and makes active learning strategies, such as group work, challenging.

A standard
computer
lab before
renovation

General Classroom Design & Language Learning

- Classroom design can promote (or impede) engagement and interaction (crucial for language learning) (Gands & Ransemer-Topf, 2017)
- A wide variety of classroom design factors have been analyzed (e.g. how flexible seating can accommodate to different instructional contexts (lecture vs. group work) (Sanders, 2013).

Computer-facilitated Language Learning

- SIGNIFICANT amount of research on how computers facilitate language learning
- Research looks at how instructors and students use different tech to improve/replace “traditional” pedagogy
 - Virtual Reality (Schweinhorst, 2002)
 - Digital games (Reinders, 2012)
 - Telecollaboration (O’Dowd, 2012)

A Possible Gap in the Research

Classroom
Design
Research

CALL Research

Computer Lab
Designed for
Language
Learning?

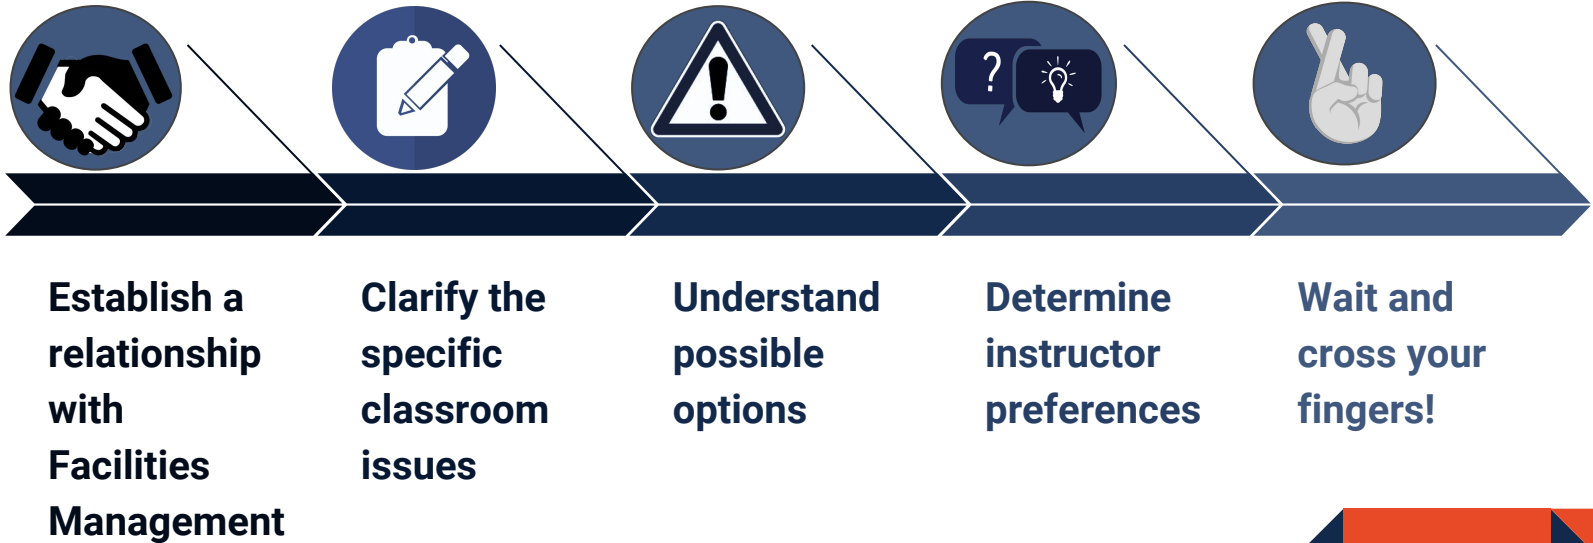

The Question

How can we design a
more flexible space
for a language
composition course
that **promotes active
student collaboration**
within the confines of
a **static computer
classroom?**

Reimagining the Language Computer Classroom

Establish a relationship with Facilities Management

- Work with them regularly for training and support for instructors
- Express challenges and concerns

Clarify specific issues

- Confirm issues with classroom survey for instructors and students (easier way to promote small group work, clear line of sight at all times).
- Follow-up with a report of survey results and implications to facilities management)

Understand your reality...

- Work with facilities management to discuss **possible, realistic options** regarding changes and additions: **Budgetary limits?**
Innovation threshold?

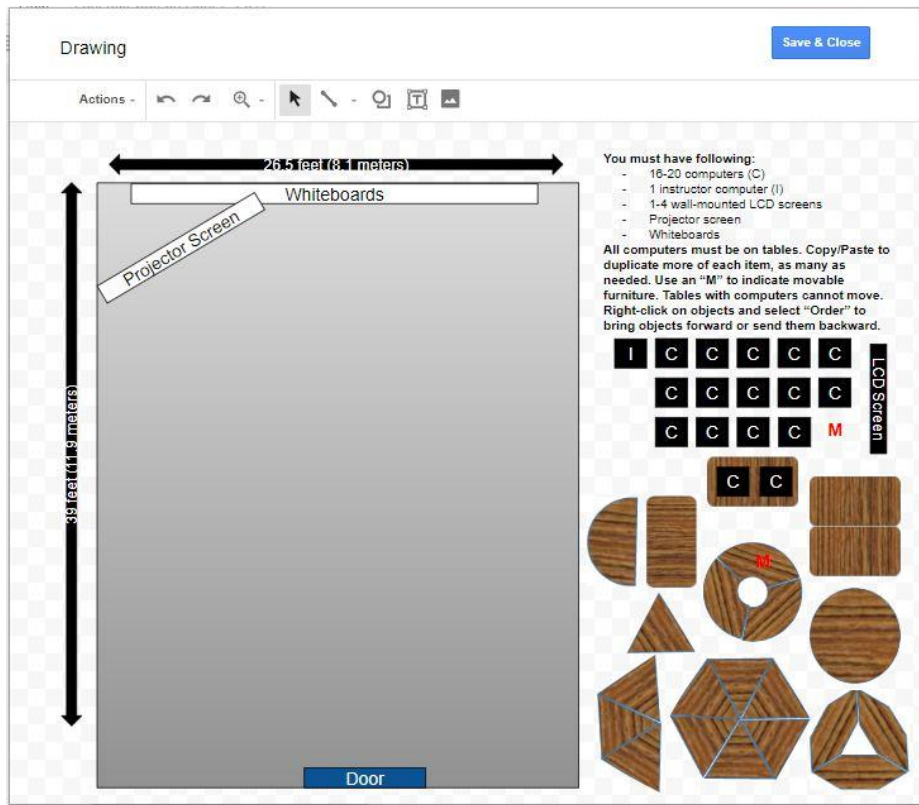

Determine instructor preferences

- Hold a **focus group** of instructors: they design their “**ideal**” **classroom layout** and then discuss layout and furniture options within our “**real**” **context**.
- Invite Facilities Management to observe!
- Summarize results with an **informal proposal**.

Use Google Drawings for Imagination Time!

You must have following:

- 16-20 computers (C)
- 1 instructor computer (I)
- 1-4 wall-mounted LCD screens
- Projector screen
- Whiteboards

All computers must be on tables. Copy/Paste to duplicate more of each item, as many as needed. Use an "M" to indicate movable furniture. Tables with computers cannot move. Right-click on objects and select "Order" to bring objects forward or send them backward.

Instructors
came up with
3 general
layouts

Keep instructors focused on *effectiveness* over the excitement of *innovation*

Substitution → Augmentation → Modification → Redefinition

SAMR model (Puentedura, 2009), used to evaluate the use of technology vs. traditional methods for activity design → **modified**

~~Substitution~~ → Enhancement → Transformation

***Don't “innovate” for the sake of innovating;** Would the addition of LCD screens merely act as a Substitution of our current uses of classroom technology? Or would it **enhance or transform** our teaching strategies?

Then, the waiting game...

- Proposal submitted... wait...
- **Success!** Summer 2017 renovations
- Fall 2017 pilot (2 classrooms, 17 sections)
- Fall 2017 post-pilot survey

Results indicated that instructor satisfaction **greatly increased!**

New Computer Lab Layout #1

New Computer Lab Layout #2

Advantages of New Layouts

The newly redesigned classrooms...

- Allow instructors to take advantage of the various technological affordances of a computer lab
- Also offer the flexibility and space to arrange the classroom in ways more conducive to pair and small group work depending on the task at hand.
- Adapt to the environment to the students

Redesign Challenges and Lessons

1. The only recurring complaint is the **table shape...** and I knew that it would be. **Trust your teacher instincts!**
2. **Training and classroom management** should be an annual event/discussion **among new and experienced instructors.**
3. **Start establishing relationships** with Facilities Management now. This takes time, and **you never know when** it's time to buy new furniture!

It's time to reimagine the language computer classroom!
