

# Making a Room with roomescapemaker.com

1. Sign up with an email and activate your account.
2. Press CREATE, add a number or any letters you would like, choose a name for your room, and then save it. Your room is ready to work on!
3. There are three dropdown menus on the right side of the page. The first one is AVAILABLE GRAPHICS, which gives you the choices of what you basically need for an escape room. Every time you choose something, it appears on the left side of the page, and you can arrange them however you'd like.
4. The second dropdown is GAME ITEMS, in which you can choose the features such as colors, when they will appear or disappear during the game, and what happens after clicking on them.
5. The third dropdown is GAME PARAMETERS, which lets you activate the timer or show an introduction to make your game more appealing.
6. Every time you make a change, you should save the project, and then you can preview your game to see how it is working.
7. After you create your game and you are happy with it, you can send it to review. If it is approved, other people can also see it on the website and try it.
8. Some points to remember:
  - Building a connection between the clues and the items is easier if you move backward.
  - The app gives you some good advice in “warning” every time you save the game.
